Summary

Hi! I'm Bryan a frontend developer. I love building websites while I improve constantly my skills and learn more about development technologies. On my portfolio you can see all my projects with more detail. Thank you for your time.

Skills

- React
- JavaScript
- Css3
- HTML5
- Unit testing with Jest
- SQL
- Java

Experience

My Portfolio (January-2022):
To make it I used **React, JavaScript, CSS and Jest to unit tests.**

I designed and developed my own portfolio, it has a responsive design and a good accessibility, you can see all my projects there with live demos and GitHub repositories.
- Github
- Website

Freelancer- Website for a beauty salon (December-2021):
To make this website I used: **React, JavaScript, CSS, React Router**.

This website has been designed and developed by me, it has a responsive design and a good accessibility, it has animations to show its services and a carousel of images to show the salon.
- Github:
- Website.

Bill Software (September-2021):
To make this desktop app I used: **Java** and **SQLite.**

This app is a bill software designed by me and it use a relational data base with SQLite. It has various modules to manage products, clients and invoices and it has a UI for the cashier where him can create new invoices and add or edit client's information.
- Github

Education

- Udemy Certificate of React course - January-2022

- Bachelor in: **Information Technologies** - 2020-present (distance mode) **Universidad Particular de Loja**, Ecuador
